1. The table below gives the length of pieces of wood.

| Height h m | Frequency |  |  |
| :---: | :---: | :---: | :---: |
| $0<\mathrm{h} \leq 0.2$ | 12 |  |  |
| $0.2<\mathrm{h} \leq 0.5$ | 14 |  |  |
| $0.5<\mathrm{h} \leq 0.75$ | 28 |  |  |
| $0.75<\mathrm{h} \leq 1.2$ | 18 |  |  |
| $1.2<\mathrm{h} \leq 2$ | 30 |  |  |

a. What is the modal class?
b. Find the class interval that contains the median.
c. Work out an estimate of the mean.
d. Draw a frequency polygon of the data shown in the table.

A cuboid container has the external dimensions 1.4 m by 78 cm by 81 cm . The thickness of the container sides is 1 cm thick. Water flows into the container at a rate of 95 litres per minute. The water is left flowing for 7 mins 45 seconds. Does the container overflow?

The Core at Chernobyl was 7 m high and 12 m in diameter. Into this, 211 graphite tipped boron rods were lowered into this. On the $26^{\text {th }}$ April 1986, this caused a catastrophic explosion that killed 31 people and possibly a lot more.
a) If each rod was 8 cm radius and 6 m long, what would be the total volume of the rods in the reactor?
b) What is the volume of the reactor that is not covered by rods?
4. The perimeter of the shape below is 140 cm . All the equilateral triangles are congruent. What is the area of the shape?
