

1440 people were surveyed on how they travelled to work. The data was collected and displayed in the chart above.

- Draw a table showing the method for getting to work; the number of people that used each method; the percentage of the total number that each sector represents and the angle that needs to be drawn to represent that amount.
- In another survey, 180 people were asked how they travelled to work. The following results were received:

Method of getting to work	Frequency
Walk	45
Cycle	23
Drive	92
Bus	20

Draw a pie chart showing this information.
